Density: how much mass is packed in each cm^3

Aluminium

m = 270 g · V = 100 cm^3

d = 2.70 g/cm^3

Iron

m = 789 g · V = 100 cm^3

d = 7.89 g/cm^3

Same volume, but iron has **more mass in each cm^3**: iron is **denser** than aluminium.
