Fundamental and derived quantities

Fundamental quantities (the "bricks")

Length	l	**m**
Mass	m	**kg**
Time	t	**s**
Temperature	T	**K**
Amount of substance	n	**mol**

... plus electric current (A) and luminous intensity (cd)

Derived quantities (built with the bricks)

Surface area

length × length — **m^2**

Volume

length × length × length — **m^3**

Speed

length ÷ time — **m/s**

Density

mass ÷ volume — **kg/m^3**
