Properties of matter

How do we describe them?

Quantitative
number + unit

mass = 800 g

Qualitative
described with words

colour, smell, texture

Do they depend on the amount of matter?

Extensive
YES, they change with size

mass, volume, length

Intensive
NO, same for any size

density, colour, boiling point

Do they identify a substance?

General
NO, all matter has them

mass, volume, temperature

Characteristic
YES, like a "fingerprint" 🔍

density, melting point, solubility
