The gas laws

Boyle-Mariotte

T constant 🌡️

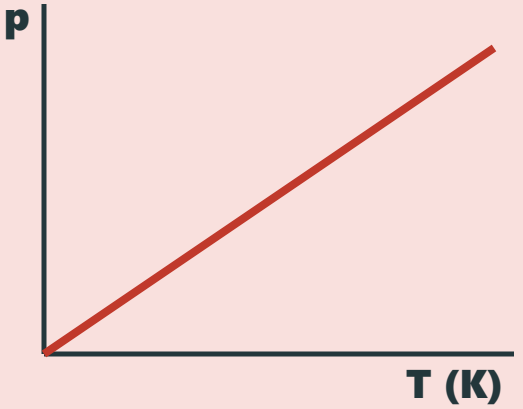

p · V = constant

Volume ⬇ → pressure ⬆
inversely proportional

Gay-Lussac

V constant 📦

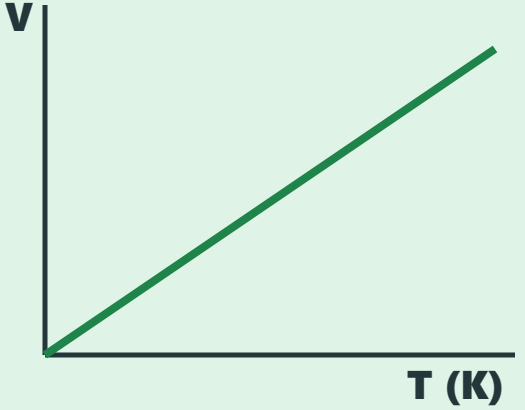

p / T = constant

Temperature ⬆ → pressure ⬆
directly proportional

Charles

p constant 🎈

V / T = constant

Temperature ⬆ → volume ⬆
directly proportional

If p, V and T all change: **general gas law** $\frac{p_1 \cdot V_1}{T_1} = \frac{p_2 \cdot V_2}{T_2}$
