Kinetic theory: what the particles are doing

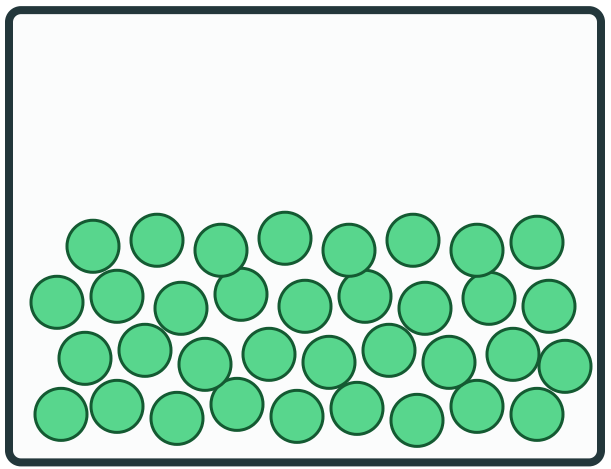

Solid

Forces between particles	**very strong**
Distance	**very close, in order**
Movement	**vibrate in place**

like people packed in a lift

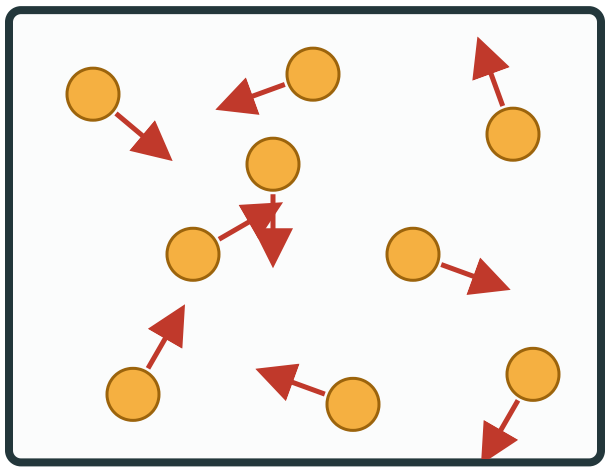

Liquid

Forces between particles	**medium**
Distance	**close, but disordered**
Movement	**slide past each other**

like people walking in a busy street

Gas

Forces between particles	**almost none**
Distance	**very far apart**
Movement	**fast, in all directions**

like people running in an empty stadium
