How to name compounds

mono	di	tri	tetra	penta	hexa	hepta	deca
1	2	3	4	5	6	7	10

binary N_2O_5 → **dinitrogen pentoxide**

The **second** element ends in **-ide**. Prefixes say how many atoms of each.

binary CO_2 → **carbon dioxide**

"mono" is not used for the **first** element (not "monocarbon").

hydroxide $Fe(OH)_2$ → **iron dihydroxide**

A metal + **OH** groups. The prefix counts the OH groups.
