The solution is EVERYTHING: solute(s) + solvent

Solute(s)

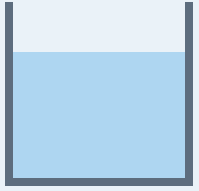
salt sugar

the substance(s) that dissolve
(there can be more than one)

8 g + 4 g

+

Solvent

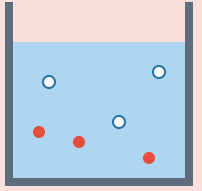


the substance that dissolves
the others
(usually water)

88 g

=

SOLUTION



the whole mixture:
solutes + solvent together

8 + 4 + 88 = 100 g

Mass of solution

mass of solution = mass of all the solutes + mass of solvent

8 g of salt + 4 g of sugar + 88 g of water = **100 g of solution**

Volume of solution

volume of solution ≈ volume of solute + volume of solvent

12 mL of alcohol + 88 mL of water ≈ **100 mL of solution**
