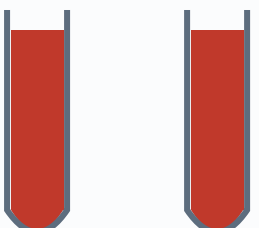
How to separate by centrifugation

Mixture: blood (cells + plasma) or muddy water · **Property used:** the **density**: the heavier particles are pushed to the bottom

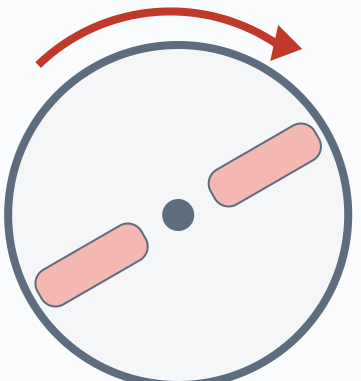
1



two tubes, same amount

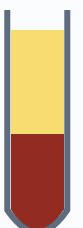
Fill the tubes and put them **opposite each other**, so the centrifuge is balanced.

2



The centrifuge **spins very fast** for a few minutes.

3



plasma
(liquid)

cells
(denser)

The **denser** part is now at the bottom and the liquid on top. Pour off the liquid carefully.
