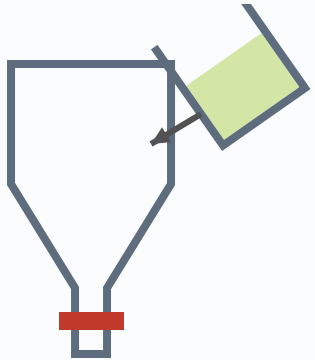
How to separate by decantation (separating funnel)

Mixture: oil + water · **Property used:** the **density** of liquids that do not mix

1

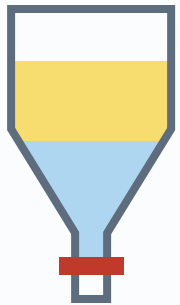


tap closed

Pour the mixture into the separating funnel with the **tap closed**.

→

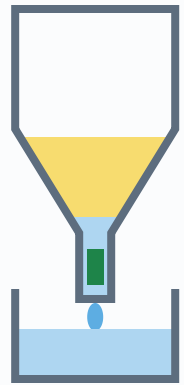
2



Wait: the liquids form **two layers**. The less dense one (oil) floats on top.

→

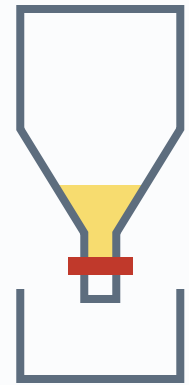
3



Open the tap: the **bottom** liquid (water) comes out. Close it when the oil reaches the tap.

→

4



The **oil** stays in the funnel. Pour it out through the top into another beaker.
