How to separate with a magnet

Mixture: iron filings + sawdust · **Property used: magnetism**: only some metals (iron, nickel, cobalt) are attracted

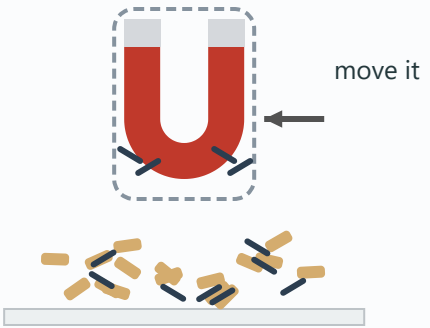

1

iron filings + sawdust

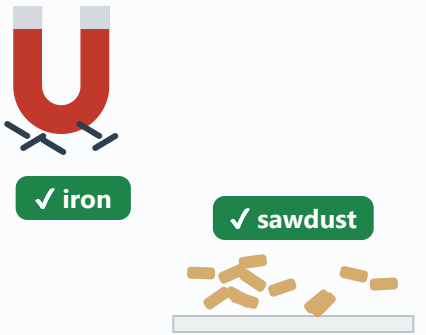

Spread the mixture on a sheet of paper.

2

Pass a magnet (wrapped in a plastic bag) **over** the mixture, without touching it.

3

The **iron** sticks to the magnet; the sawdust stays on the paper. Remove the bag to drop the iron.
