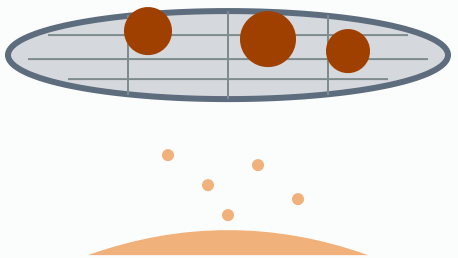
Separating heterogeneous mixtures

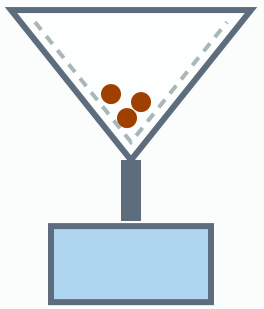
Sieving



solids of very different sizes

pebbles + sand

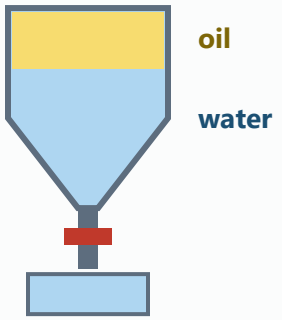
Filtration



a solid that does not dissolve, from a liquid

sand + water

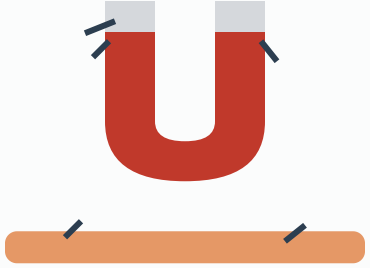
Decantation



liquids that do not mix (different density)

oil + water

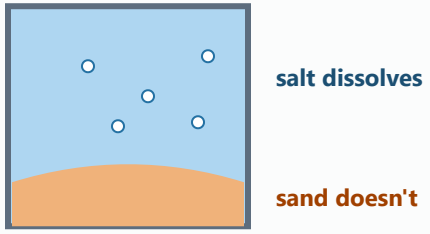
Magnetic separation



iron and other magnetic metals

iron filings + sawdust

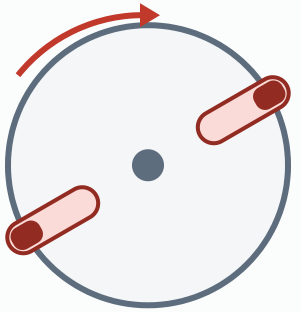
Solvent extraction



a solvent that dissolves only ONE component

sand + salt (use water)

Centrifugation



it spins very fast: the denser part goes to the bottom

blood · spin-dryer
