Free fall: a UARM with a = g ≈ 10 m/s²

v = g · t

Every second, the speed increases by about **10 m/s**. The distance fallen each second gets bigger and bigger.

🌙 **Hammer and feather**

Without air, all objects fall at the same rate, whatever their mass. In 1971, astronaut David Scott dropped a hammer and a feather on the Moon: they hit the ground at the same time!
