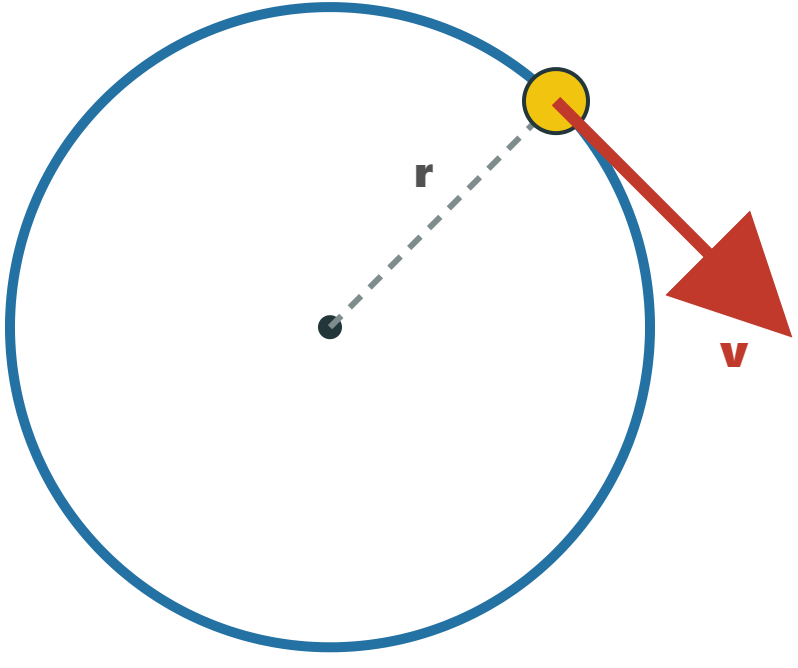
Uniform circular motion (UCM)



Same speed, but the direction keeps changing.

Period (T): time for one full turn, in s.

Minute hand of a clock: T = 1 h

Frequency (f): turns per second, in Hz. **f = 1 / T**

A fan at 300 turns per minute: f = 5 Hz

Linear speed (v): one turn = one circumference, 2πr. **v = 2πr / T**

The tip of a long blade moves faster than a point near the centre.
