Energy sources

♻ Renewable

They never run out or can be replaced quickly

Solar

solar panels, solar water heaters

Wind

wind turbines

Hydroelectric

dams on rivers

Biomass

wood, organic waste

Geothermal

heat from inside the Earth

Tidal

waves and tides

⛔ Non-renewable

Limited amounts: one day they will run out

Coal

fossil fuel

Oil

petrol, diesel, plastics

Natural gas

heating, cooking

Uranium

nuclear power stations

Fossil fuels took **millions of years** to form from the remains of ancient living things.
