Elementos de un vector

Componentes cartesianas

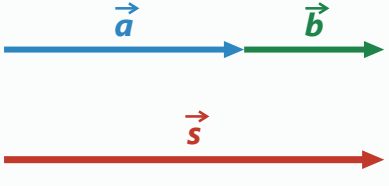

$a_x = a \cdot \cos \alpha = 4$

$a_y = a \cdot \text{sen } \alpha = 3$

$a = \sqrt{(4^2 + 3^2)} = 5$

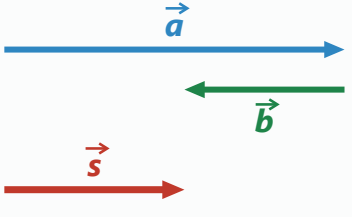

$\text{tg } \alpha = 3/4 \Rightarrow \alpha = 37°$

Misma dirección y sentido

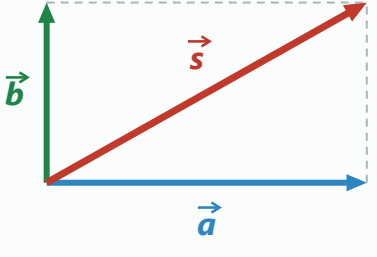

$s = a + b$

Sentidos opuestos

$s = a - b$

Perpendiculares

$s = \sqrt{(a^2 + b^2)}$
